#### **DETAILED ACTION**

#### Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/16/2007 has been entered.

#### Claim Observation

It is noted that the status identifier for claim 1 is incorrect. The correct status identifier should be "currently amended."

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1764

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-3 and 5-20 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over WO 00/58319 (hereinafter "WO '319).

WO '319 discloses a process for oligomerizing alpha-olefins, for example 1-butene, with a catalyst system obtained from: (a) a chromium compound CrX<sub>3</sub> and a ligand L that is derived from 1, 3, 5-triazacyclohexane, for example 1,3,5-tri-n-dodecyl-

Art Unit: 1764

1,3,5-triazacyclohexane or from a compound CrX<sub>3</sub>L; and at least one activator additive containing an alkyl aluminum compound, for example triethylaluminum and ethyl aluminum dichloride, and a boron compound, for example trispentafluorophenylborane. The ratio of chromium compound to boron compound is between 1:0.1 and 1:10,000. See Abstract; page 1, lines 6-27; page 4, lines 35-44; page 8, line 37 to page 9, line 3 and page 9, lines 45-46; and page 12, lines 4-19 and lines 32-38. The reference also discloses chromium compounds including CrCl<sub>3</sub> (page 7, lines 5-16), molar ratio of triethylaluminum to ethylaluminum dichloride in the range of 1-50:1, preferably 3-20:1 (page 10, lines 1-2), and molar ratio of chromium to alkylaluminum compound in the range of 1:0.1-500 (page 9, lines 38-47). The oligomerization is conducted at a temperature ranging from 1 to 120° C, at a pressure ranging from 3 to 120 bar (page 13, lines 5-10), and under inert gas such as nitrogen and argon (page 12, lines 45-47).

With respect to the claimed molar ratio of boron compound to chromium compound, the range disclosed by the reference overlaps with the claimed range. In the alternative that the reference does not anticipate the claimed range, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have determined the optimum molar ratio of boron compound to chromium compound to achieve most effective desired result.

With respect to the claimed molar ratio of chromium source to the alkylaluminum compound, the range disclosed by the reference appears to encompass the claimed range. In the alternative that the reference does not anticipate the claimed range, it would have been obvious to one having ordinary skill in the art at the time the invention

Application/Control Number: 10/506,602 Page 5

Art Unit: 1764

was made to have determined the optimum molar ratio of chromium source to alkylaluminum compound to achieve most effective desired result.

## Response to Arguments

Applicants' arguments filed 3/14/2007 were addressed in the Advisory Action mailed 4/16/2007.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to In Suk Bullock whose telephone number is 571-272-5954. The examiner can normally be reached on Monday - Friday 6:00-2:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola can be reached on 571-272-1444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
